

JDC Israel Eshel

Touching Lives, Transforming Communities

**5-Year Strategic Plan
for Optimal Aging in Israel
(2021-2025)**

Letter from the CEO

The 2021–2025 multi-year plan serves as JDC Eshel’s eleventh five-year plan. It is based on fifty years of activity in the field of aging in Israel, conducted in collaboration with the government, local authorities and civil society. In this sense, the tenth five-year plan – which we complete in 2020 – has already laid the foundation for this new plan. However, the new plan includes a number of innovations and emphases.

The *first* stems from JDC-Israel’s strategic planning, which JDC Eshel forms a part of. The process redefined JDC-Israel's role, from an entity dealing primarily with developing services for vulnerable populations to an entity helping the country cope with social challenges in a measurable, goal-oriented manner. This direction was formulated in discussions with senior partners and planning entities in government, who pointed to the difficulty impacting specific social issues, despite the fact that considerable investment has been made in them. As a result, **the Challenge of Aging has been defined as one of the six challenges that JDC-Israel will be promoting.** In 2015, the Challenge of Aging was also defined by government resolution as one of the seven socio-economic challenges the State of Israel will be promoting over the coming years. This definition compels us to acquire a new planning language, to expand our channels of action and implementation, and to harness many circles of partners and change agents.

The *second* stems from the **Covid-19 pandemic that has caused a social, financial, and health crisis affecting the entire economy, and especially the older population.** It increases the fragility of people and organizations, including those in our target population and those who act on their behalf. As a result, it requires us to improve our abilities and tools to identify needs, develop solutions, and find the right balance between what is urgent and what is important.

... letter from the CEO

JDC Eshel has taken part in a joint effort to assist the older population in Israel, focusing on the most vulnerable. We have found ourselves reacting quickly to a range of needs from the field – for example, emergency assistance to local authorities and institutions; tutorial videos and online training for caregiving personnel; adapting services to provide long-distance/remote assistance in the Guidance, Employment, and Rehabilitation centers being piloted; training additional teams for the nursing system; expanding the integrated care management teams; and assisting Holocaust survivors.

Over time, we realized it was necessary to reevaluate our planning and response. As a result of this process, we conducted two surveys that assessed risk and resilience factors among older adults since the Covid-19 outbreak, established an information system to identifying emergency needs, continued the strategic planning work that had begun prior to the pandemic, and held sessions to brainstorm and pool knowledge and insights.

We thank our loyal partners on this journey – the Ministry of Health, the Ministry of Labor and Social Affairs, the Ministry for Social Equality, the Ministry of Finance, the Prime Minister's Office and the National Insurance Institute – and our committed philanthropic partners for enabling us to perform this essential work. We will continue the discourse and work in the various professional forums – of policy makers and caregiving teams, scholars and entrepreneurs, finance and social experts, the young and the old. [We all face the challenge of aging together!](#)

Wishing everyone a happy and healthy 2021.

Yossi Heymann (CEO, JDC-Israel ESHEL)

Dr. Sigal Shelach (CEO, JDC-Israel)

Introduction to the Strategic Plan

2020 was a watershed year - the world experienced a pandemic, many lost their lives or their loved ones, others lost their source of income, and we all lost our familiar routines. The older adult population was in the headlines as a high-risk group. Geriatric institutions were in the line of fire, and infection within them was fatal. Those living in the community isolated in their homes for long periods. Families, the community, and government authorities mobilized to provide immediate assistance. As the weeks went by the understanding sank in that we are in the midst of an ongoing event. Emergency became routine, and with it the need to prepare for an extended long-term effort based on updated information, pooled resources, and creative, practical solutions.

In this challenging reality, it is difficult to plan - and yet necessary. The cornerstones of this strategic plan is an ability to operate using a single agreed-upon compass, to bridge language gaps, to pool resources and to combine forces.

The strategic plan before you is based on such a compass:

- **A map of indicators for optimal aging** that was formulated and adopted by the Forum of Government of Israel Partners as the basis for a Government resolution headed by the Prime Minister's Office.
- **Advancing 8 Large-Scale Initiatives (LSIs)** over the coming years: 1. Reinforcing personal resilience and retirement preparedness 2. digital literacy 3. quality employment 4. social involvement 5. managing health and functionality [physical and cognitive] 6. preventive nursing care 7. age-friendly cities, and 8. accessible housing.

Desired Impact

Maximizing a person's independence and autonomy

during the aging process

and delaying dependence on others and on public services

with respect to health, social and economic risk,

and in according with the indicators for optimal aging.

The impact will maximize the benefit to the person & to the economy.

Indicators of Optimal Aging

Health

Healthy Lifespan

% Years in Good Health

Men: 56% (11.2 yrs)

Women: 47% (10.6 yrs)

Functionality

17% - difficulty with ADL

33% - difficulty with IADL

Meaning

Loneliness

28% feel lonely

Quality of Life

36 pt. (12-48) in CASP

Economic Resilience

Disposable Income

NIS 7,504 (\$2,300)

[21% are <60% of this amount]

Ability to Cope

40% struggle to cope financially

Predictive Indicators for Optimal Aging

Health Management

50% have low health literacy 

Compliance / Persistence

- Rehabilitation 
- Medication

Healthy Lifestyle

49.1% good BMI 

Nutrition - Mediterranean 

16.9% smoke 

1.9 l alcohol 

Exercise 60%/40% 

Active Lifestyle

28% employment 

39% participate in social activities 

Networking (Support system: family/friends) 

Financial Capability

Low financial literacy 13.7/21 pts 

Income / Assets, savings, suitable employment 

Digital Literacy – a cross-cutting predictor that influences all metrics

Change Theory & Guiding Action Principles

Preventive Approach

Cultivate an awareness of the importance of planning wisely with regards to health, social and personal and economic resilience, to prevent today what may be damaging later.

Modifying Behavior

The indicators aim to improve the behavior of the older adults and those responsible for them, in order to enable optimal aging.

A Compass for Optimal Aging

Large-Scale Initiatives comprising direct programs are guided by six primary indicators for optimal aging. These indicators, which focus on health, meaning and economic resilience, will direct the Ministries' work to close the gaps in the field of aging.

LSIs to Achieve Impact

The Large-Scale Initiatives comprise a collection of programs and complementary cross-cutting actions, working together to achieve an accumulative impact.

Modifying Key Infrastructures

Most LSIs are based on national-level infrastructures – that interface with large numbers of the target population, and/or encompass a significant proportion of the public investment in old age. This stems from a desire to channel the current invested resources towards prevention, and from an understanding that establishing a new platform requires years of significant investment. Eleven such platforms were mapped – some are old and traditional, while others are in the process of being established. These include the nursing systems, HMOs, hospitals, social service departments, day centers, Supportive Communities, urban employment centers, guidance centers, and more. Also marked were informal platforms such as TV, radio, and news media, which are influential in promoting awareness and motivating people to take action.

Leaders & Partners

Each LSI is led by one or more government ministry that is responsible for integrating the work with other relevant government entities and synchronizing the work with the target populations. This is accompanied by a professional steering committee comprising relevant partners from the public, private and third sectors.

Older Adult Subgroups At Risk

Large-Scale Initiatives reduce gaps in the predictive indicators as they relate to subgroups of the older adult population at risk of decline in health, meaning and economic resilience.

Measuring Progress

The indicator will be enacted on three levels: the program, the LSI, and the challenge. The indicator related to the challenge will be reviewed every two years and publicized by the Government.

Large-Scale Initiatives to Create National Impact

Selecting the Large-Scale Initiatives (LSIs)

- In accordance with Covid-19 – based on the research monitoring the risk populations, resilience factors, and effective actions
- Tailored to strategic directions of the partner ministries – based on ongoing discourse with the partners and their planning processes
- Based on global learning, and mapping policy directions and innovative actions for optimal aging
- Emphasizing the most vulnerable older adults as part of JDC-Israel's mission

LSIs focused on Improving Individual Wellbeing

1. Retirement preparedness
2. Digital literacy
3. Quality employment
4. Social involvement
5. Health management

LSIs focused on Improving the Service System

1. Preventive nursing care
2. Age-friendly cities
3. Affordable housing

LSI: Retirement Preparedness

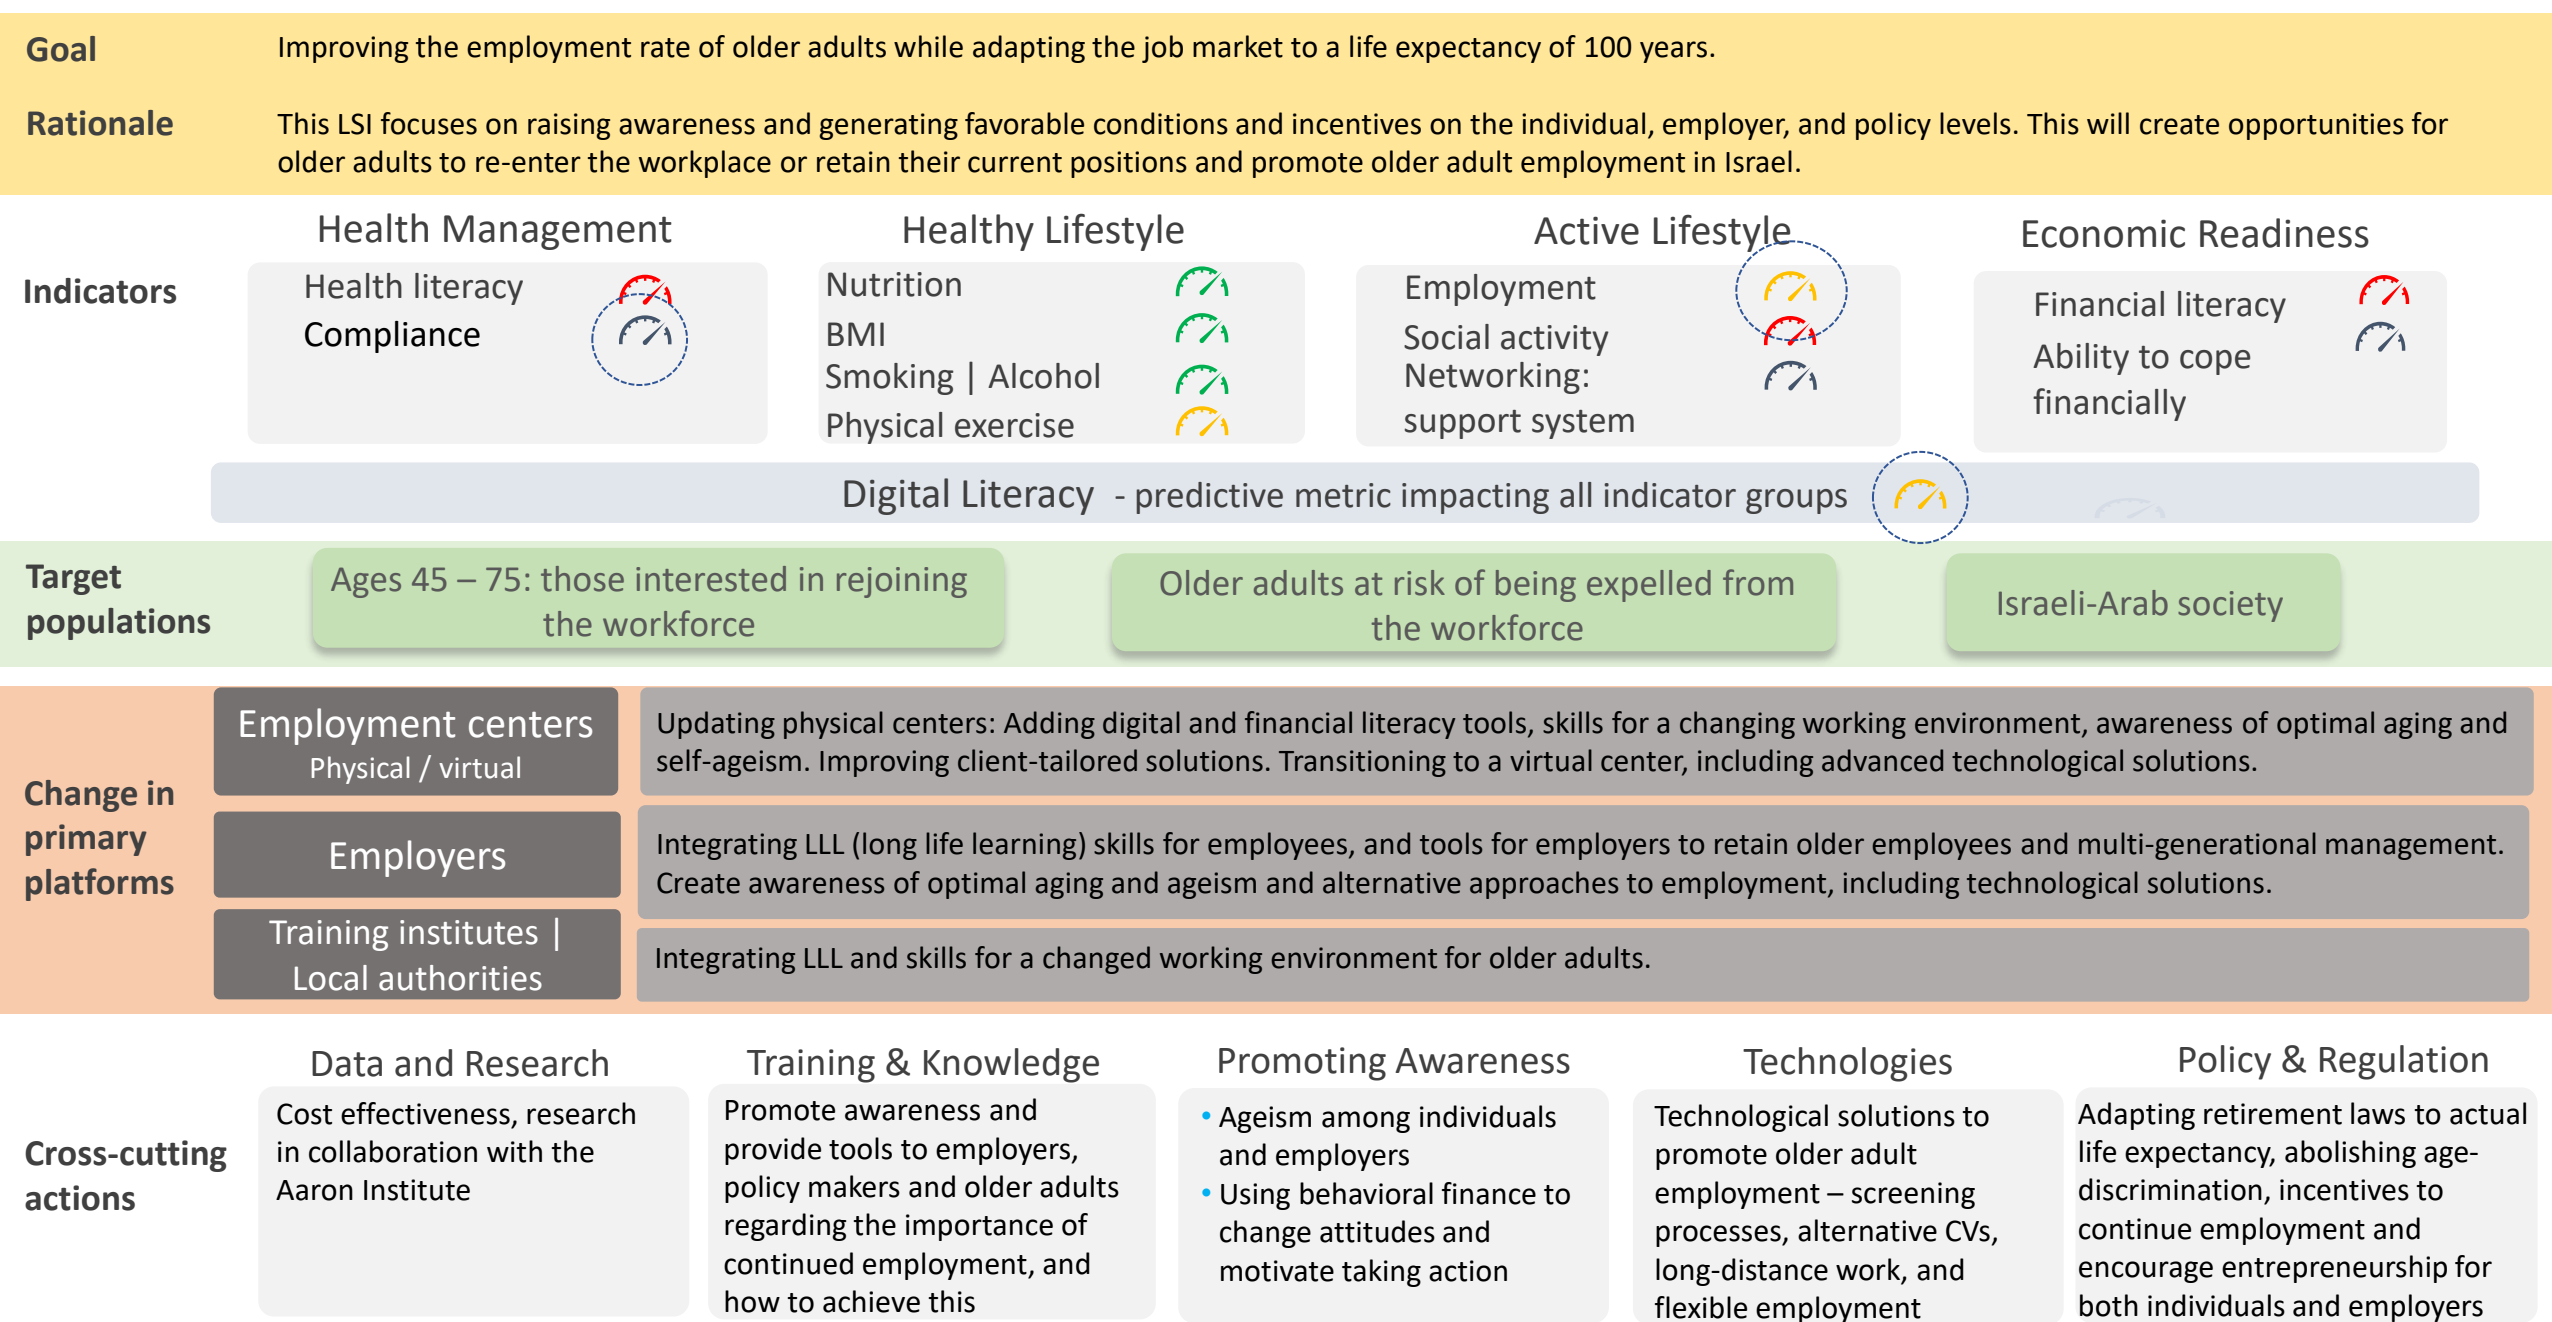

In development with partners

LSI: Quality Employment

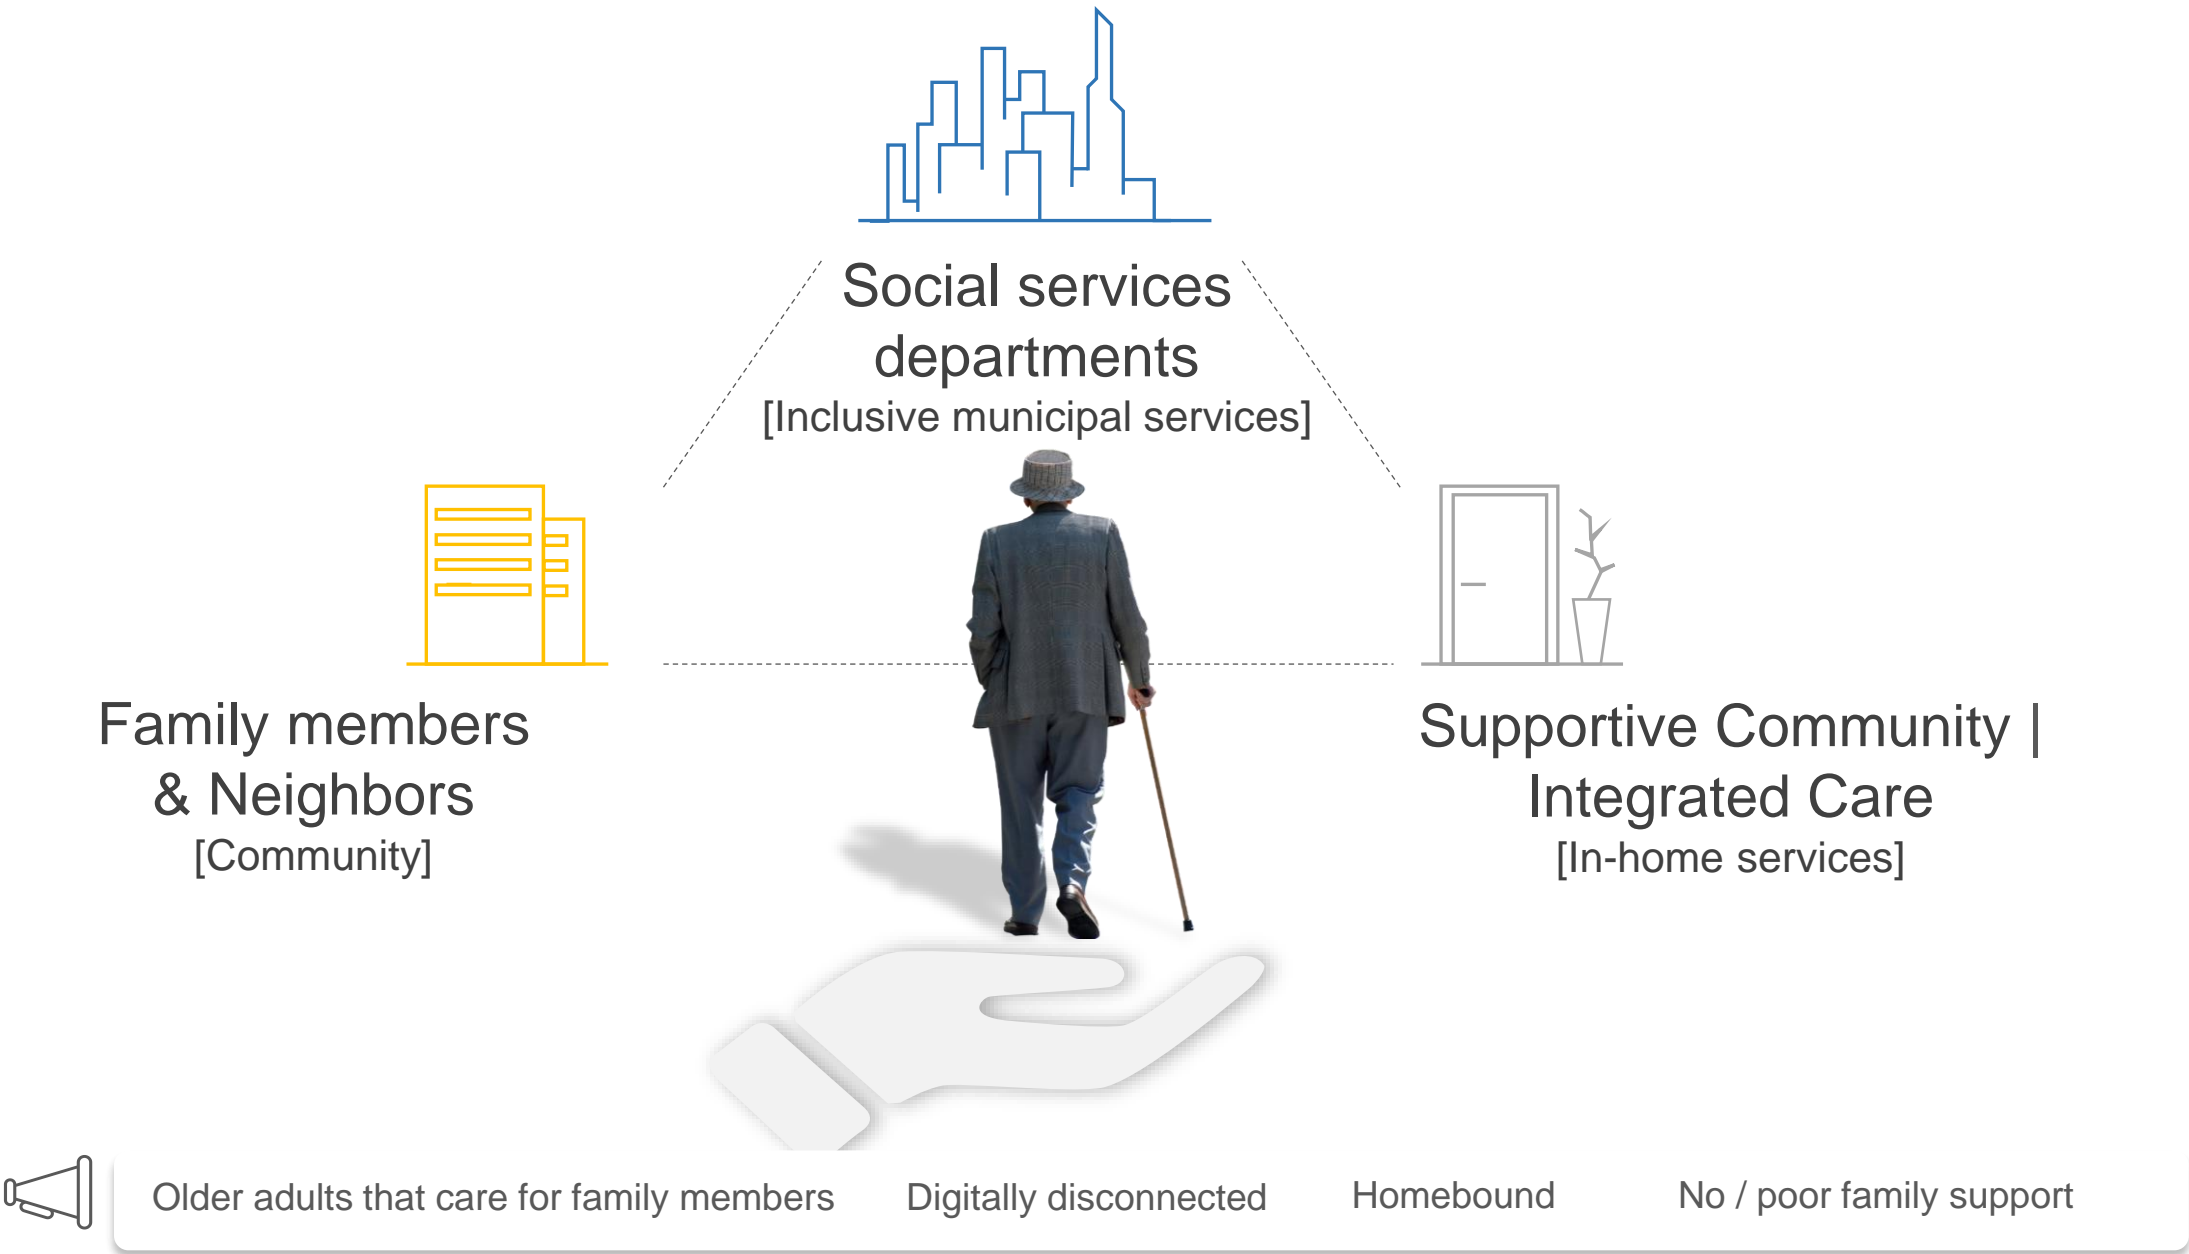

In development with partners

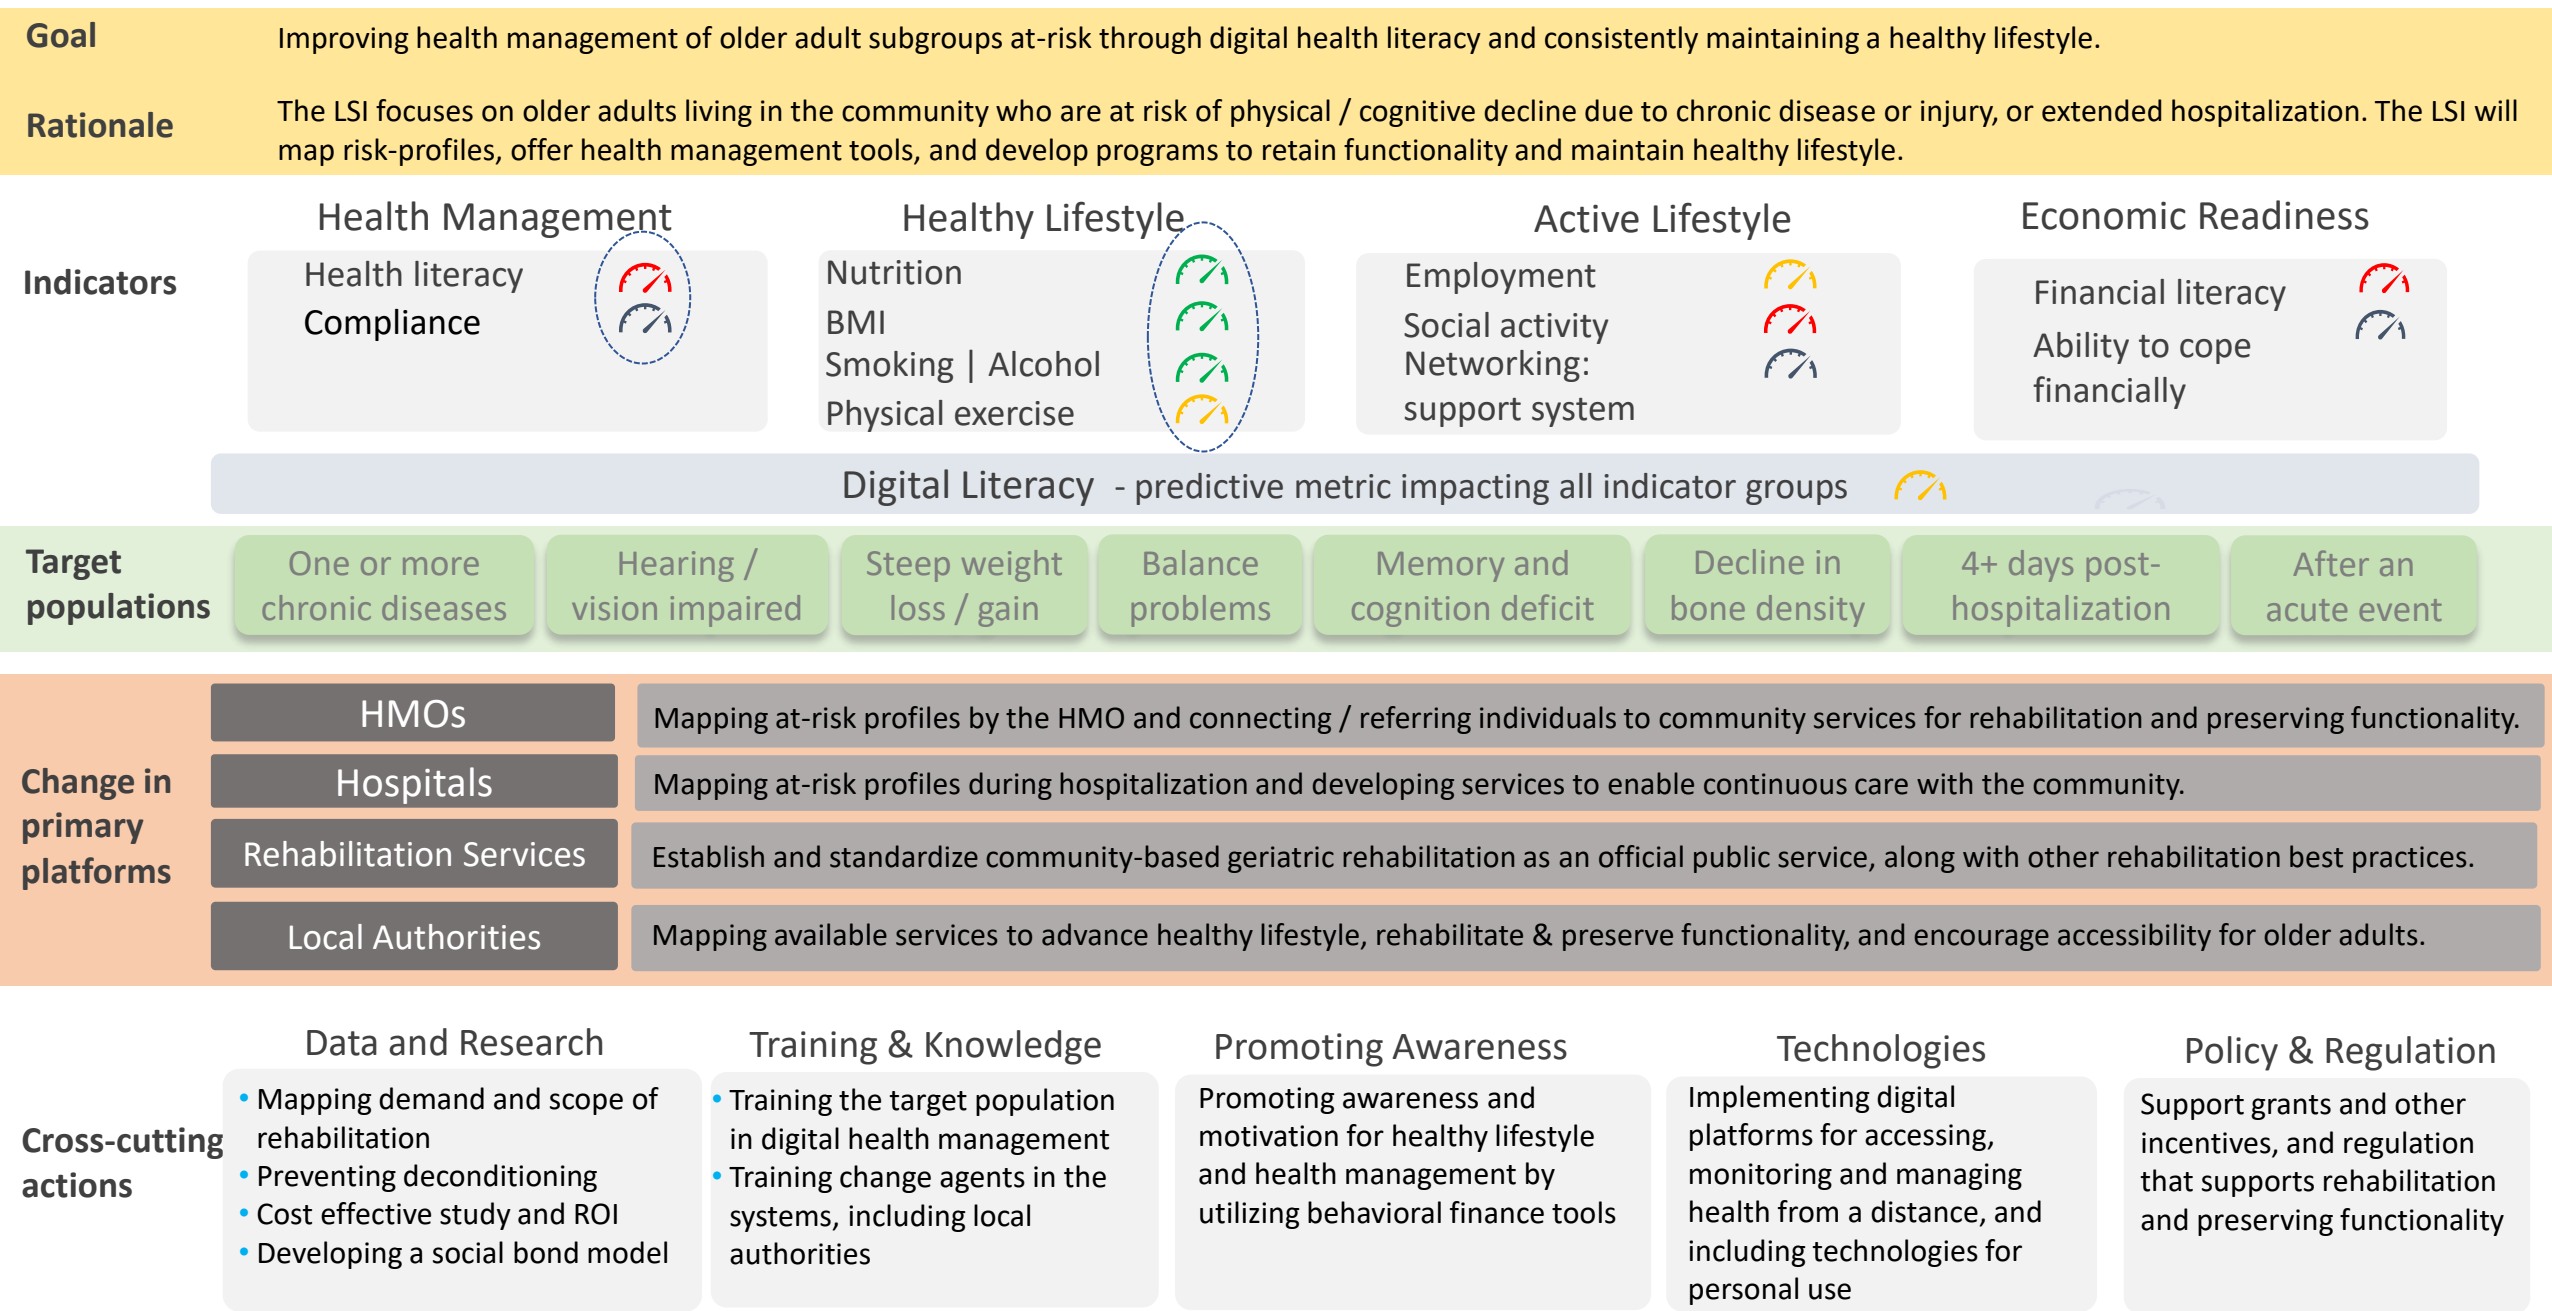

LSI: Social Involvement

In development with partners

Goal	Increasing social participation and sense of belonging among older adults who are living in the community and at risk of decline.							
Rationale	This LSI focuses on actively identifying older adults living in the community who are at risk of deteriorating due to social disconnection, financial difficulty or deconditioning, and surrounding them with support that includes services to the home, local community assistance, and monitoring their situation through the social services department.							
Indicators	Health Management		Healthy Lifestyle		Active Lifestyle	Economic Readiness		
	Health literacy Compliance		Nutrition BMI Smoking Alcohol Physical exercise		Employment Social activity Networking: support system	Financial literacy Ability to cope financially		
	Digital Literacy - predictive metric impacting all indicator groups							
Target populations	Older adults at risk of deterioration due to social isolation, financial difficulty or deconditioning		People without family / with little support		Homebound	Digitally disconnected	Family caregivers	
Change in primary platforms	Welfare departments [Inclusive municipal service]		Evolving into a comprehensive municipal platform – identifying at-risk populations and connecting them with community-based services, while promoting and encouraging communal life for older adults as they age.					
	Family members Neighbors [community]		Strengthening connections with family members / neighbors (apartment committees) so that they will be more attuned to the welfare and needs of older adults, and will be able and available to provide assistance or serve as a connection to local social services.					
	Supportive Community Integrated Care [client-focused home service]		Converting the platform into a home service specializing in homebound older adults / self-isolators, and which aims to promote functional retention and independence, social activity and a connection to the community.					
Cross-cutting actions	Data and Research		Training & Knowledge		Promoting Awareness		Technologies	Policy & Regulation
	<ul style="list-style-type: none">Supportive Community mappingEconomic study of family caregiversDeveloping tools for ongoing measurement of risk situations		<ul style="list-style-type: none">Digital literacy for older adultsTraining change agents among professionals and in the community		<ul style="list-style-type: none">Campaign to harness neighbors' awareness and alertness as to the welfare of the older adult population		<ul style="list-style-type: none">Technology to identify deteriorating risk situationsDigital platform for social connection and retaining functionality	Integrating changes as part of the Ministries' procedures and social work regulations

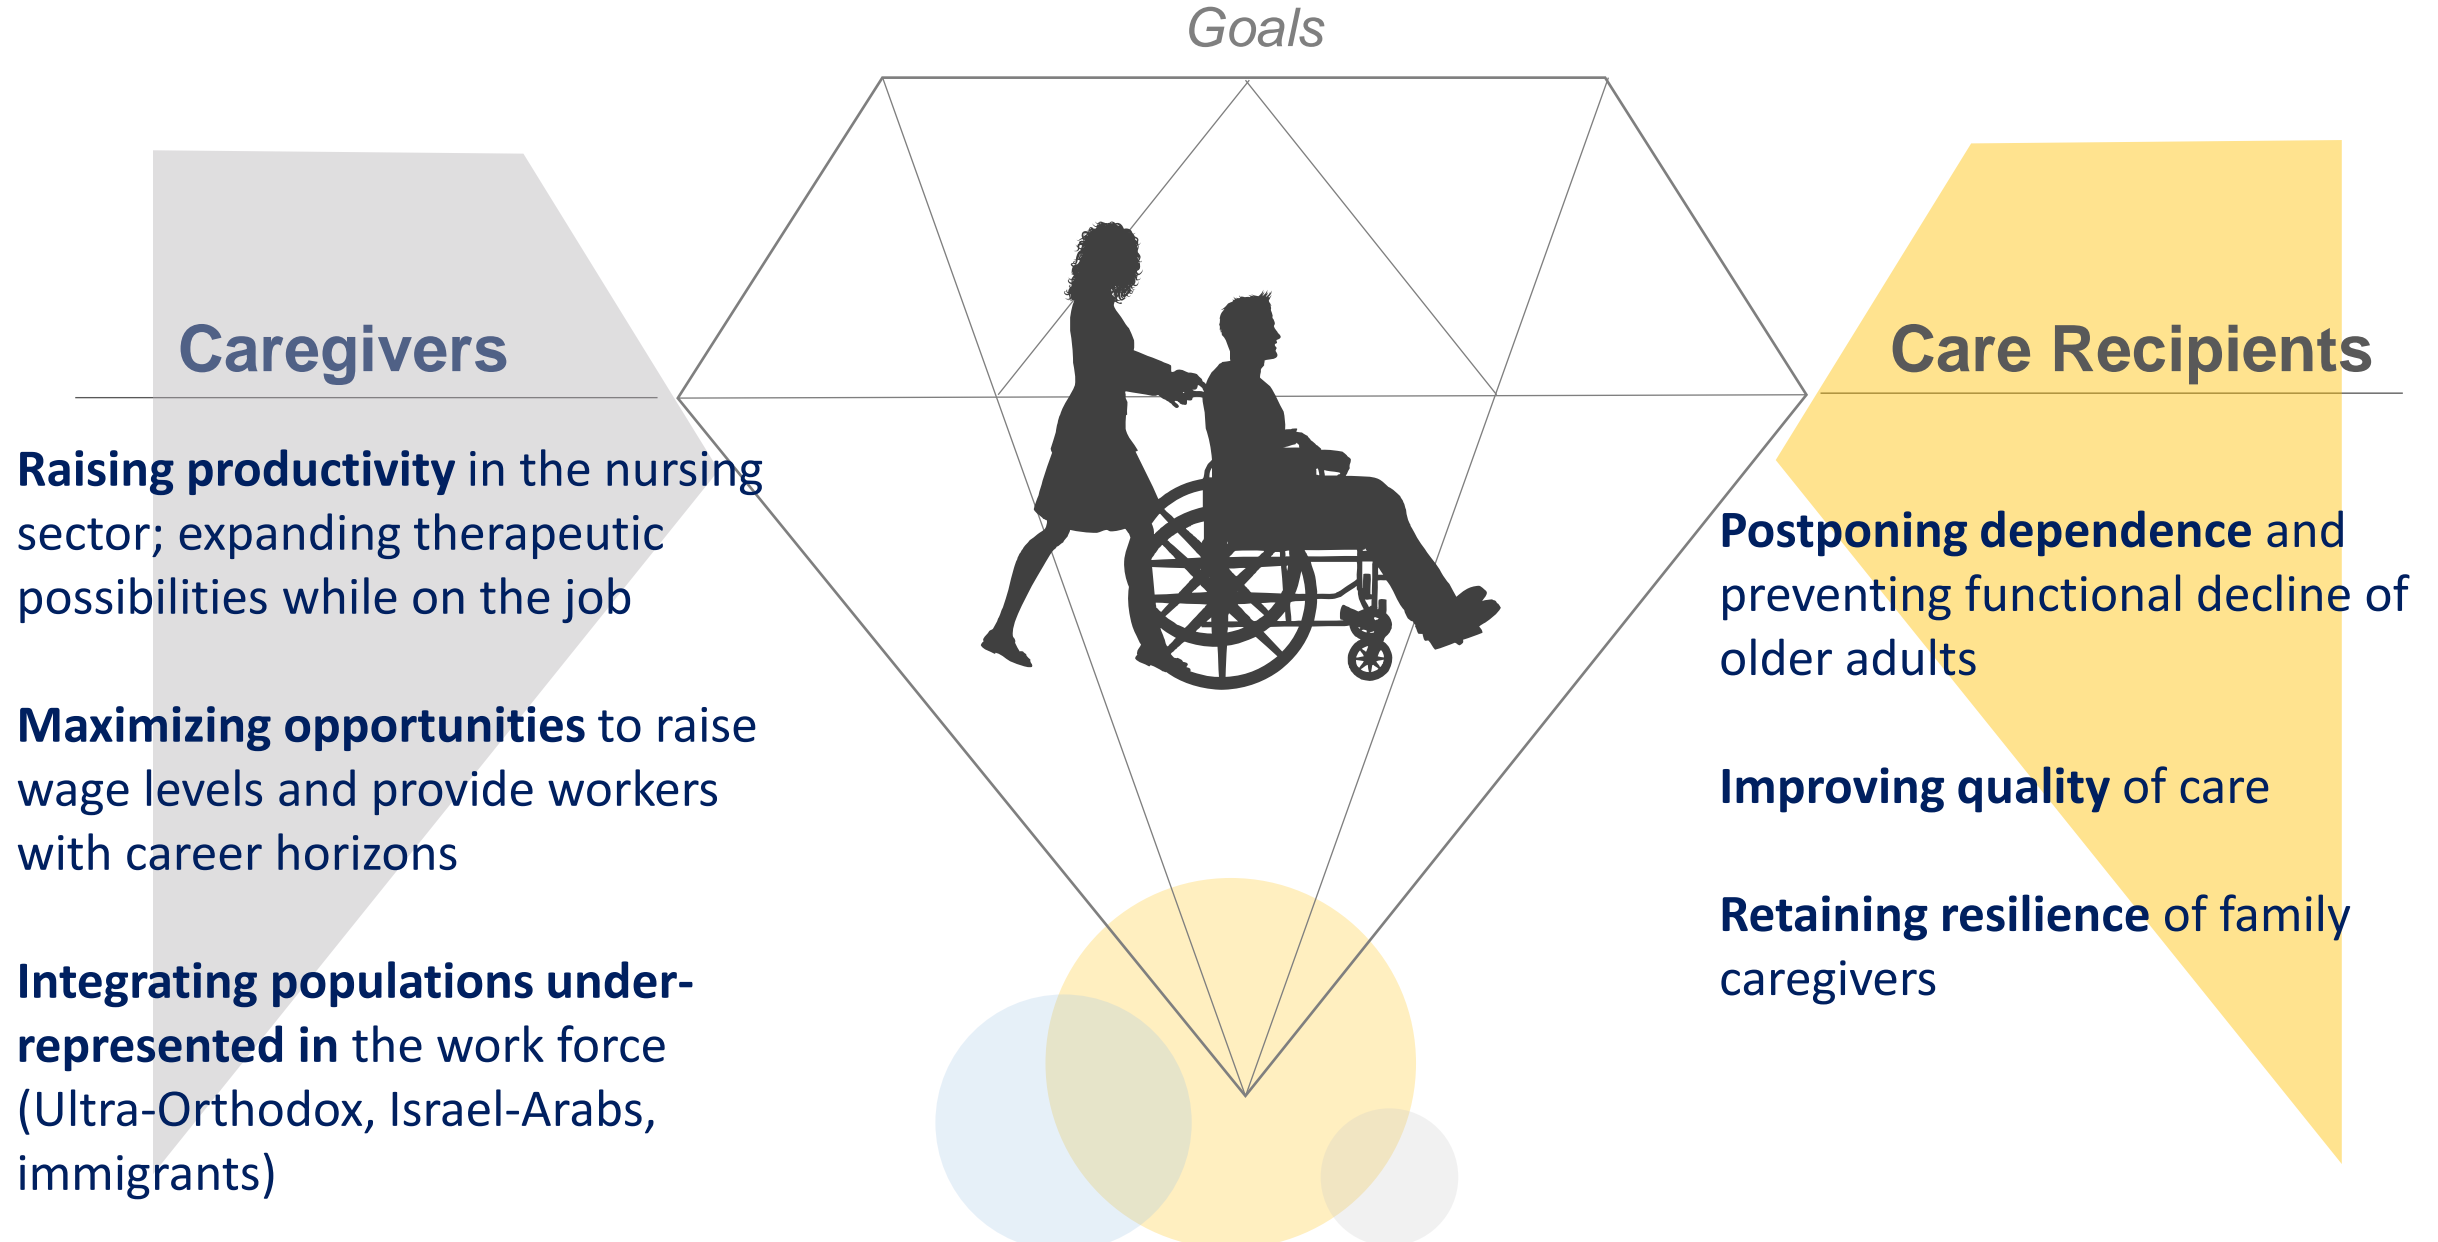

LSI: Preventive Nursing Care

In development with partners

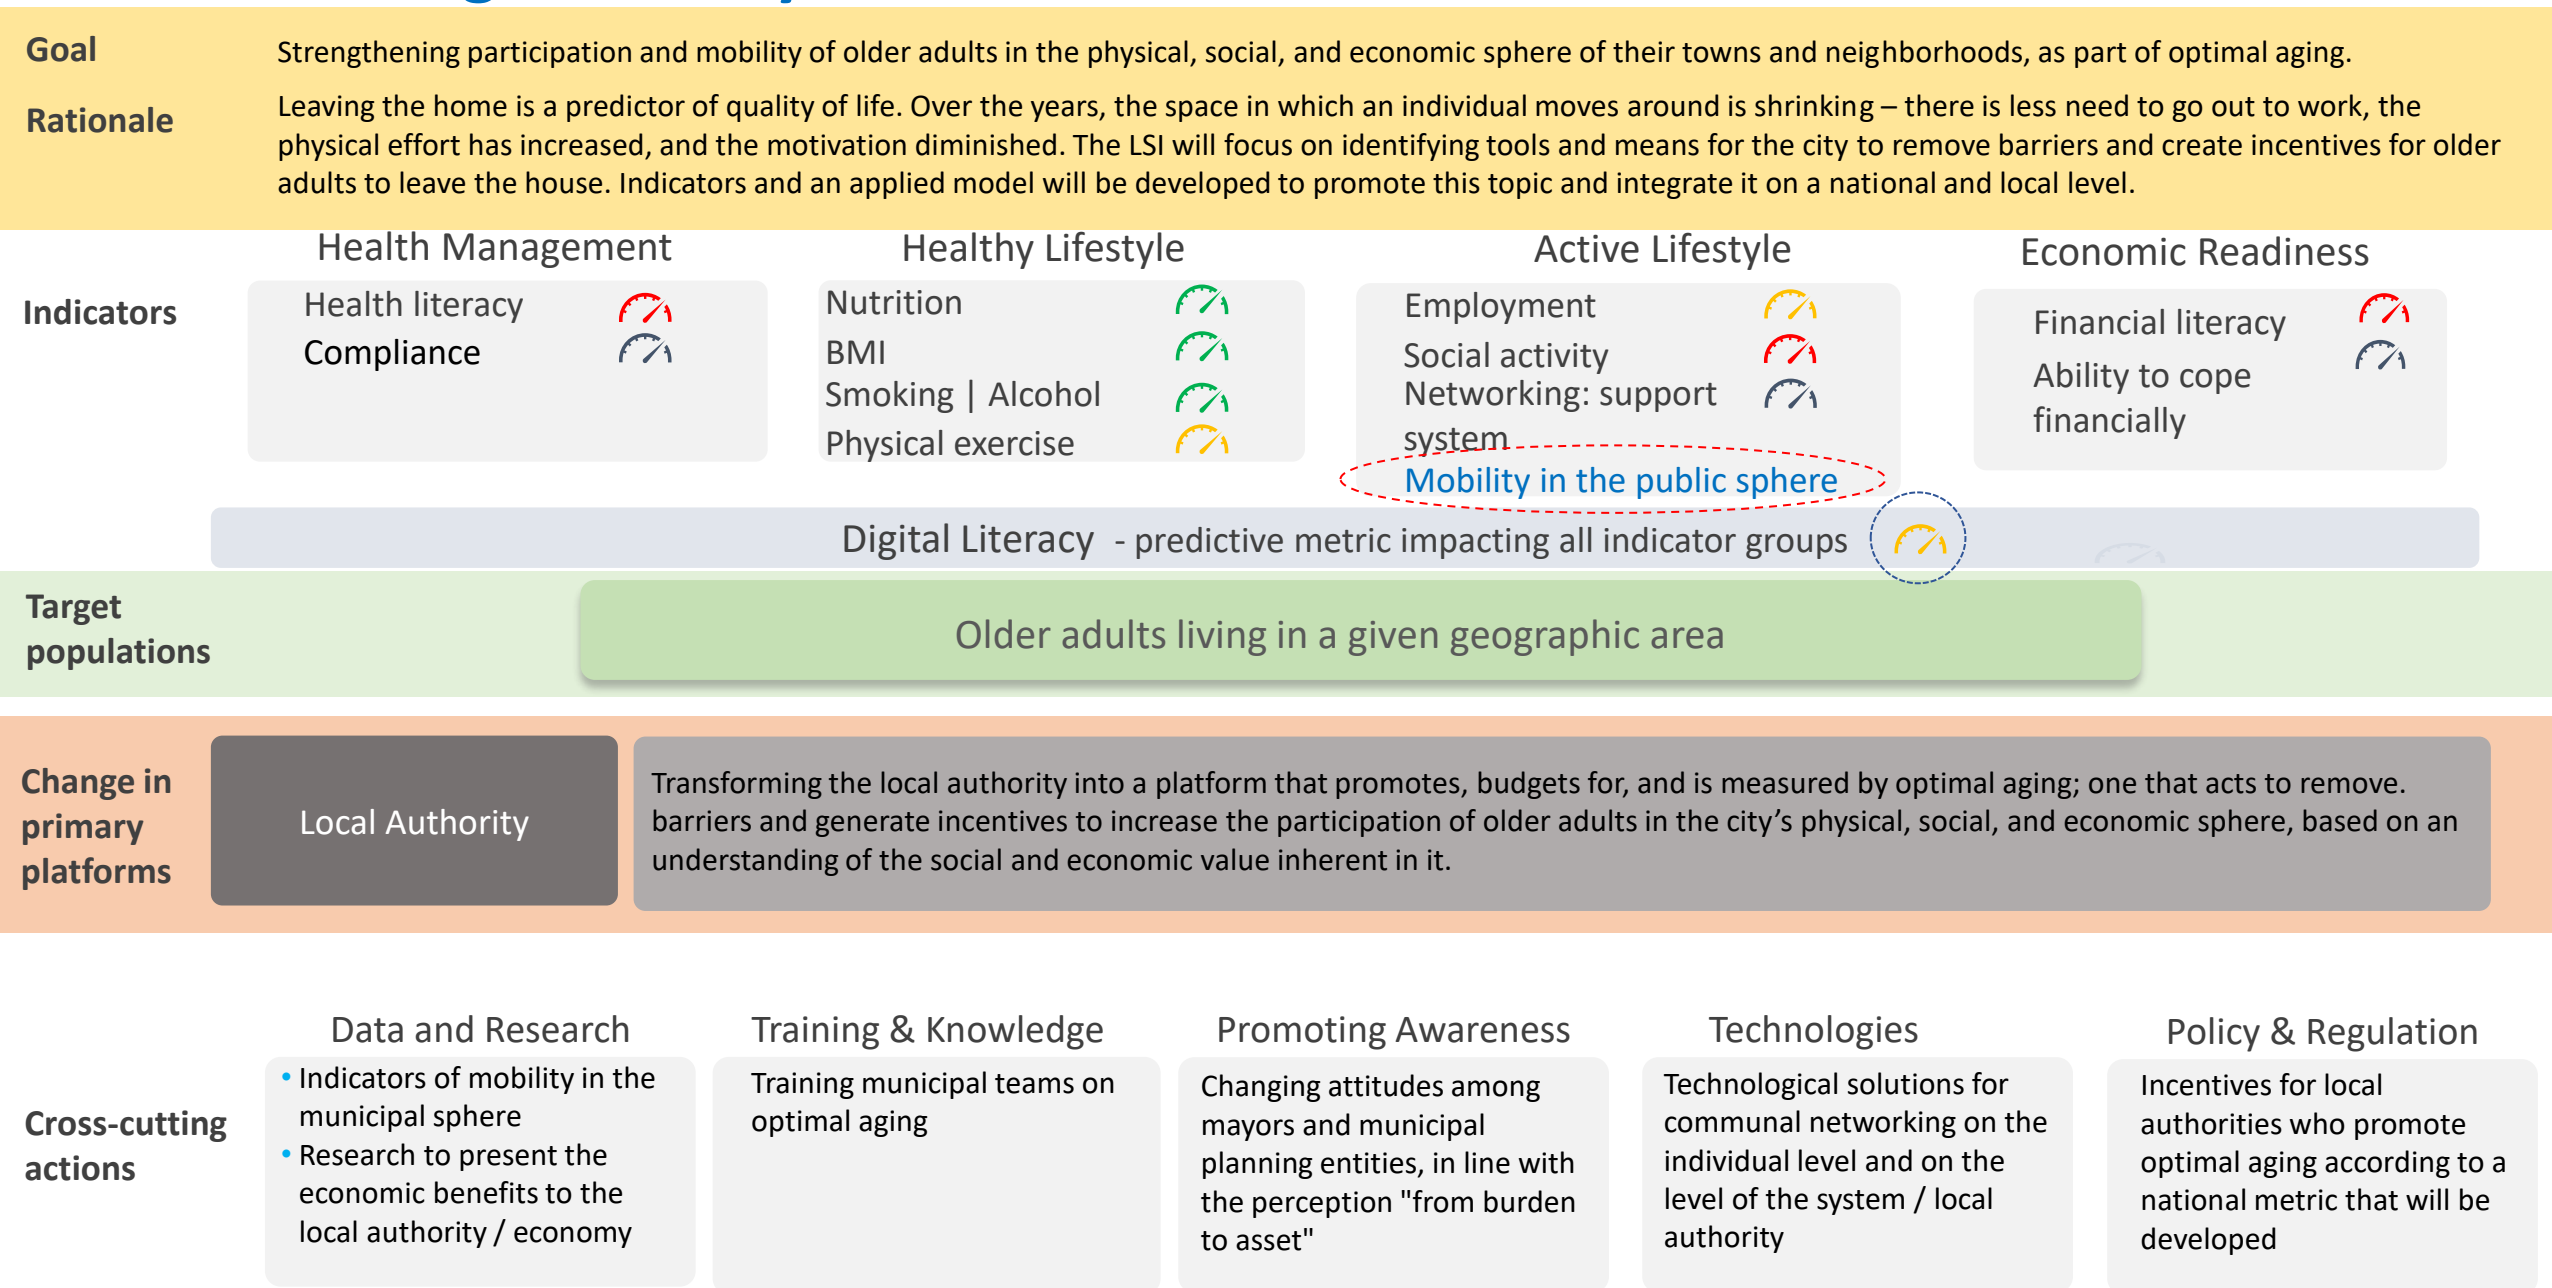

Goal	Slow the rate of deterioration among elderly that receive nursing stipends and live in the community or an institution, through the impact of (1) professional caregivers and (2) directing the field towards preserving functionality.				
Rationale	The LSI focuses on developing training / internship opportunities for caregivers, and generating conditions and incentives to assimilate the practices in the field.				
Indicators	<div>Health Management</div> <div>Functionality 17% - difficulty with ADL 33% - difficulty with IADL</div> <div>Healthy lifespan</div>		<div>Meaning</div> <div>Loneliness</div> <div>Quality of life</div>		<div>Economic resilience</div> <div>Disposable income</div> <div>Ability to cope financially</div>
Target populations	Older adults eligible for nursing benefits in the community and in institutions		Professionals in the community and in institutions	Caregivers in the community and in institutions	Family members in the community and in institutions
Change in primary platforms	Nursing Care in the Community		The nursing system in the community has the knowledge, the tools, and the means to support independent functioning and postpone dependence.		
	Nursing Care in Institutions		The nursing system in institutions has the knowledge, the tools, and the means to retain functionality and to respect autonomy in situations of dependency.		
	Training Institutes		Training institutes have the tools and ability to offer continuous training to postpone dependency, support functionality, and preserve autonomy.		
Cross-cutting actions	<div>Data & Research</div> <ul style="list-style-type: none">Index for postponing dependency economic modelLearning from global and local experienceData analysis, public participation		<div>Training & Knowledge</div> <ul style="list-style-type: none">Formulating the committee's recommendationsValidating recommendations from the fieldDigital literacy pilot		<div>Raising Awareness</div> <p>Changing attitudes among family members and professionals regarding the role of the caregiver</p>
